

Course Syllabus

I believe that the goal of all of us who love our work and want the very best for our patients is to continually look for high quality solutions that are achievable in shorter time periods and for a reasonable cost. For some time now we have understood that the best way to achieve this objective is to combine techniques, when possible, working directly on the patient and concluding everything on the same day. This approach utilizes two fantastic tools: WeldOne and Conometrics.

Weldone: intra oral welding of titanium components by means of a dedicated machine developed by the author.

Conometric: friction retained restorations without screws or cement.

During the 3 course days I will explain the large number of different implant-prosthetic solutions that are obtained by the synergy of these two concepts (WeldOne & Conometric) with both analog and digital workflows, based on the results of my research and clinical practice.

The course covers all technical and clinical aspects, along with numerous practical sessions to ensure that delegates fully understand the principles involved and their practical application.

Upon completion of the course, the delegates will receive all relevant literature and a certificate of completion.

Limited number of participants

DEGIDIEDUCATION

Registration form

Please complete the form with block letters, and then send the form and a copy of the bank transfer document to the following email: corsi@degidi.it

name _____ first name _____

name to appear on the invoice _____

invoice address _____

_____ post cod _____

city _____ state _____

phone _____ fax _____

e-mail _____

VAT n° _____ VIES yes no

tax n° _____

tax identification code ID n. _____

Registration fee at course:

The Chairside Approach € 3.660,00

Payment should be made by means of a bank transfer to:

DENTAL BUILDING

Banca Popolare dell'Emilia Romagna - Bologna Agenzia n° 1

DEGIDIEDUCATION

The Chairside Approach with WeldOne and Conometric technique

An educational path in 3 steps

2024

WeldOne™ Concept
May 27

Conometric Concept
Singles
May 28

Conometric Concept
Partial & full arches
May 29

DR MARCO DEGIDI
ODT GIANLUCA SIGHINOLFI

- 1st Day -
May 27, 2024 - 9 am to 5 pm
WeldOne™ Concept

PROGRAMME

Intra-oral welding: history and background
The WeldOne Welding Unit and dedicated components
Correct design and construction technique of the framework in the immediate loading
Prosthetic shell lab technique: standard and digital procedures
Partially and fully edentulous protocols
Temporary, final and durable prostheses: inclusion/exclusion criteria
Hand-crafted vs digital: synergies between WeldOne and computer-guided surgery

Re-live

Screening and discussion of numerous surgery and prosthetics videos that clearly illustrate and explain the various techniques

Hands-on

- Construction of full arch framework on a model
- Bar shaping and bending techniques with dedicated instruments

- 2nd Day -
May 28, 2024 - 9 am to 5 pm
Conometric Concept-Singles

PROGRAMME

Limits of cemented and screw-retained restorations
Advantages of conometrically retained restorations: simplicity, precision, retrievability, maintenance
Conometric and Chamber Concept in the single implant restorations
From the Conometric Concept to Acuris: the evolution of a brilliant idea
Conometric single restoration with immediate loading and staged loading approach
Single-crown conometric restoration with digital and traditional workflow
Sub crestal placement and Gap Free restorations: how to develop the optimal emergence profile

Re-live

Screening and discussion of numerous surgery and prosthetics videos that clearly illustrate and explain the various techniques

Hands-on

- Acuris crown seating and removal with dedicated instruments
- Learn how to seating and removal a definitive conometric bridge with dedicated instruments

- 3rd Day -
May 29, 2024 - 9 am to 5 pm
Conometric Concept-Partial & full arches

PROGRAMME

The Conometric Concept and multiple implant restorations (partial or fully edentulous)
How to share a fixed restoration on multiple implant platforms using the Conometric Concept
Decision criteria for choosing between socket-fit (FP1) and hybrid (FP3) bridges
When is it better to employ an immediate temporary and when instead, directly, a final full-arch restoration
Screw-retained vs conometric full arch bridge: decision criteria
From temporary to final restoration in 1 appointment, traditional and digital workflow

Re-live

Screening and discussion of numerous surgery and prosthetics videos that clearly illustrate and explain the various techniques
